

Weight container

model **GC-500**

For easy assembling a testweight from 150 kg up to 500 kg.

Properties

- version: stove enamelled steel
- bottom consisting of bars, so that small dirt cannot stay in the box
- empty weight 150 kg, justified, optionally available with certificate
- 2 compartments, fillable with single block weights (option) up to 350 kg, thus reaching a total weight of 500 kg
- calibration chamber located in the center of the container for calibration the own weight of 150 kg
- by using single testweights any weight between 150 and 500 kg can be assembled
- the container is easily movable through a fork lift truck or pallet truck because of the high feet
- standard delivery empty; the required number of block weights is available on application
- standard color: black; optionally available in different color
- standard version without lid; optionally available with lid
- overall dimensions l x w x h 875 x 500 x 425 mm (excluded lifting lugs)
- height included lifting lugs: 510 mm
